

# cucurbit crops

- Reduces transplant shock
- Increases root number and shoot vigor
- More and larger fruit per plant
- Increases fruit sugar levels and shelf-life
- Higher returns per acre

Kelpak, a natural plant nutrient extracted from freshly harvested *Ecklonia maxima* kelp, scientifically proven to increase the health, quality and yield in a wide variety of crops. Kelpak, the global leader in cellular burst seaweed products for over thirty years

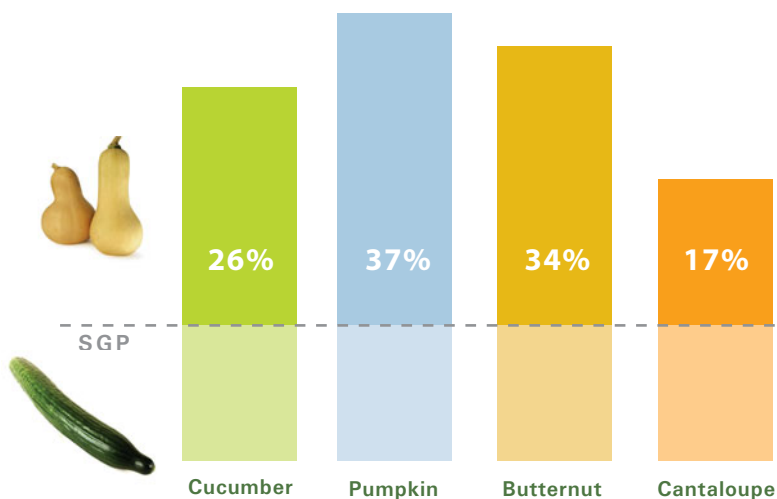

### Cucurbit trials – California

% Yield Increase above standard grower program (SGP)

### Cucurbit trials – South Africa

% Yield Increase above standard grower program (SGP)

### RECOMMENDED APPLICATION RATE

#### Transplants

Dip the roots of seedlings (or seedling tray) in 1 gal Kelpak per 100 gal of water before transplanting

Follow up with a 2 to 3 pt/Ac Kelpak foliar spray 14 days later and repeat the foliar spray 14 – 21 days later

#### Direct seeding

Apply Kelpak as a foliar spray at 2 to 3 pt/Ac at the 3 to 4-leaf stage and repeat the foliar application twice at 14 day intervals

Use of a standard surfactant is recommended. Kelpak can be applied in mixes with other pesticides and foliar nutrients. pH of spray solution should be below 7
