

plums / prunes

- Improves rooting of nursery trees
- Stimulates root and shoot development in newly developed and established orchards
- Improves fruit set and fruit retention in bearing trees
- Increases fruit size and brix levels
- Increases yields

KELPAK

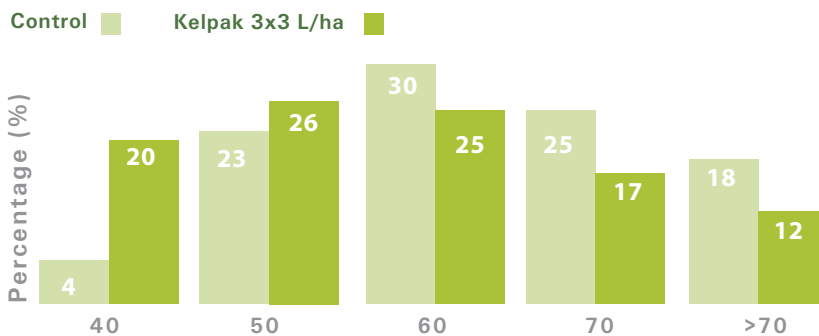

Kelpak, a natural biostimulant extracted from freshly harvested *Ecklonia maxima* kelp, scientifically proven to increase the health, quality and yield in a wide variety of crops. **The global leader in auxin based seaweed products for over thirty years**

Trial on Angeleno Plum, Chile	
2010-11	2011-12
7% less fruit drop	17% better total yield
5% more fruit weight	18% better return
5% improved sugar content	5% better sugar content

3 L/ha Kelpak application at 50% bloom, petal drop, schuck split (sepal drop)

Trial on Larry Anne Plum, Chile - 2011

Fruit size distribution (fruit/box) of Larry Anne Plum Chile 2011

**DROP FOR DROP
THE MOST EFFECTIVE
BIOSTIMULANT**

RECOMMENDED APPLICATION RATE

Bearing trees Three Foliar sprays of 3 L/ha at pink bud to 50% bloom; petal fall and sepal fall. Optional sizing sprays after pit hardening and 14 days later

Post harvest spray at 0.2% with nitrogen application and repeated 14 days later for recovery of heavy bearing

Tree establishment Dip bare roots of nursery trees in 1% Kelpak solution directly before plant-out. For better tree development apply foliar sprays of 250 ml Kelpak per 100 L of water (0.25%) with foliar sprays during early growth
