

# hazelnuts

- Reduces abiotic stress
- Improves nut set
- Increases hazelnut quality
- Increases yields

Kelpak

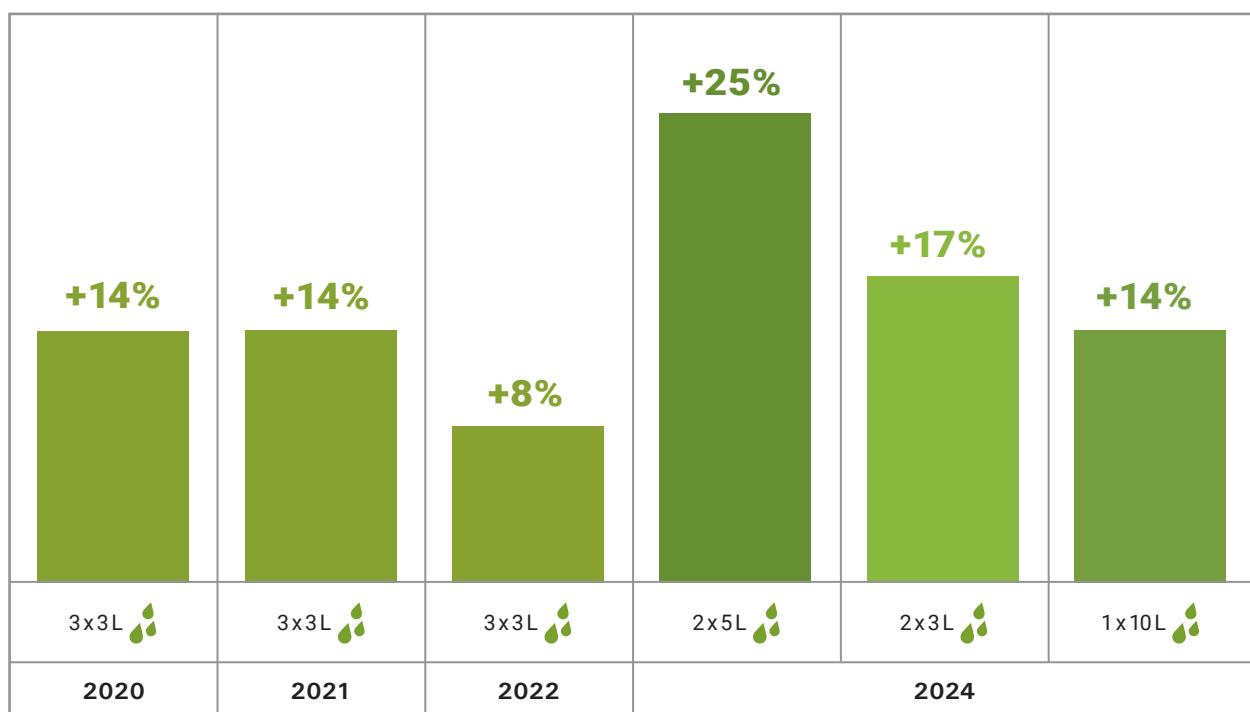

Kelpak is a natural biostimulant manufactured from the brown kelp *Ecklonia maxima*, found on the west coast of South Africa. Produced using a cold cellular burst extraction method that preserves its delicate compounds, Kelpak significantly improves germination and yield in hazelnuts.

**A global leader in seaweed products for over 47 years**

## % Yield increase above standard grower practice – Italy, various Kelpak applications

### Recommended Kelpak application timing and rates

30 days before fertilisation

Foliar spray 30 days before fruit-set at a rate of 3 L/ha

**Rate** 3 L/ha

15 days before fertilisation

Foliar spray 15 days before fruit-set at a rate of 3 - 5 L/ha

**Rate** 3 - 5 L/ha

At fertilisation

Foliar spray at fruit-set at a rate of 3 - 5 L/ha

**Rate** 3 - 5 L/ha

When applied in a total spray volume of more than 1000L/ha, maintain a minimum dilution rate of 0.5%.

**Maintain pH below 7**

**Kelpak can be used together with most agrochemical tank mixes**

plant growth in harmony with nature
